Title of the Invention

A COVER AND A HANGER FOR HYGENIC BABY PACIFIER

Invention

The invention is about a cover and a hanger structure that aims to keep the pacifiers hygienically while babies are not using their pacifiers. The purpose of the invention is to form a pacifier protective cover, which is made of 100% cotton fabric and has an elasticized shrinkable mouth, in which the pacifier can be placed, and to ensure both the protection of the baby's health and the parent's peace. It is the provision of a hanger consisting of Velcro straps in order to adjust the length of the pacifier strap according to the user's request and to keep it at this adjusted length.

Advantages

By the help of this invention it enables the baby's freedom of movement so it occupies less space than other protective plastic covers and the fact that the hanger is light and the hooked ring that is placed in this corrugated ring by taking the dress between the clothes. It also allows the baby to lie facedown, crawling, and lying on the baby's face. On the other hand, it does not disturb the baby in crawling movements and does not damage the baby's clothes.
