

**Reference Number: 025418/00110**

## **Title of the Invention**

SURGICAL INSTRUMENT HANGER

## **Invention**

The invention allows the surgeons on both sides of the patient to be easily fixed by fixing the suspension rings (2) on which the basic surgical equipment used in head and neck surgeries are hung and the vessel sealing device, which is frequently used in such operations, to the cavity (3) formed by removing the mold in the middle of the shaft (1). It is about the surgical instrument hanger, which allows access to the operation area and can be easily moved closer to and removed from the operation area and positioned in the chest area of the patient.

## **Advantages**

Thanks to the invention, it is aimed that surgeons will be able to perform the surgery faster, easier and avoiding unexpected and unwanted accidents during instrument exchange, with little need for the operating nurse.

## **Current Status**

TURKEY: Registered

## **Keywords**

Vessel sealing, Surgical instrument hanger
